Why Version Control?

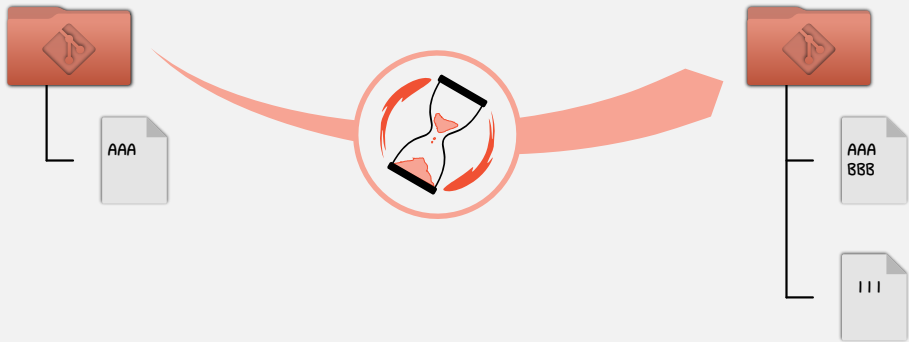

Why Version Control?

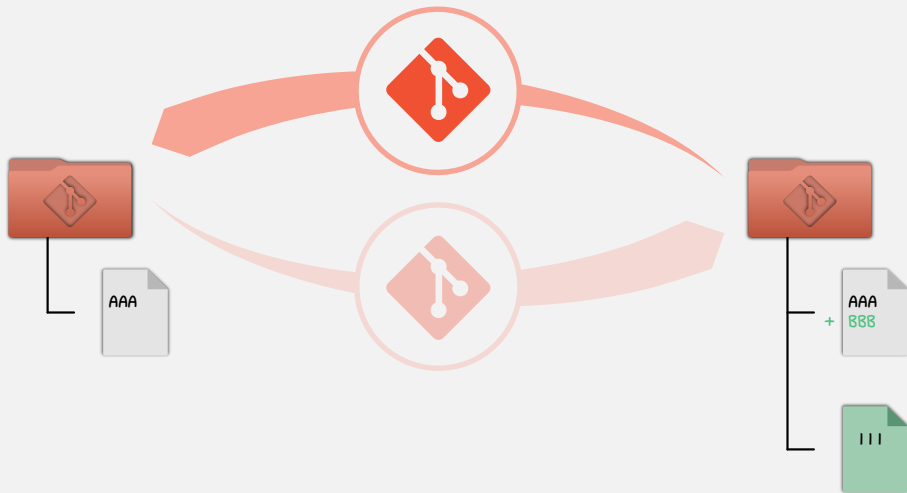

time travel with git

Image by Oto Godfrey & Justin Morton

save file

vs.

git commit

same, same, but different

(permanently updating file content)

save file

- works on single file
- irreversible (overrides previous version)
- all new edits are kept
- “one-click” process

- works on directory (repo)
- reversible (appends to previous version)
- edits are logged selectively
- multi-step process

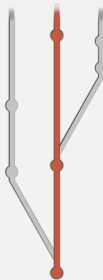

git commit

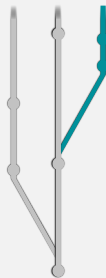

Image by pine watt

branch: **main**

git checkout

branch: **test**

Privacy please?

“transparency is surveillance”

.gitignore

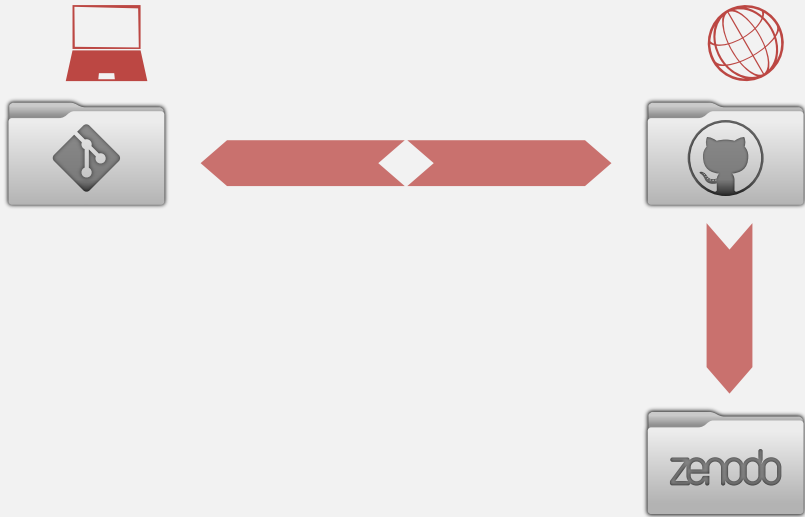

Image by ÜBERFORM

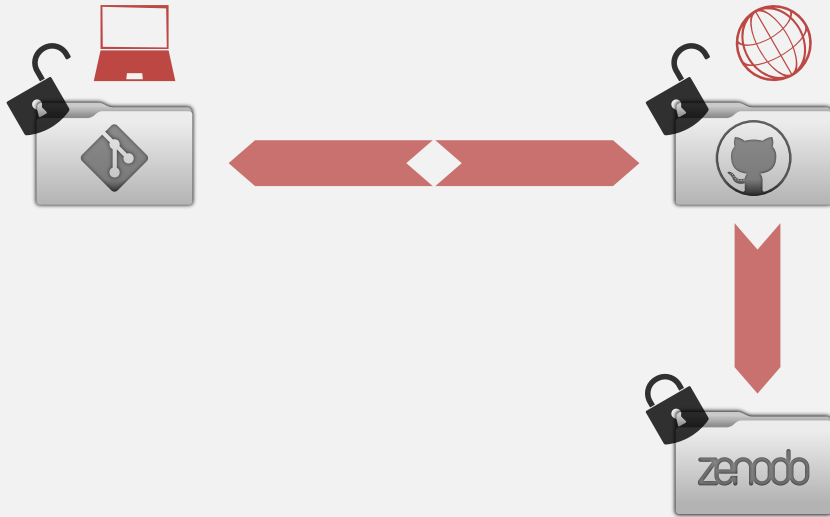

A person on a bicycle is riding away from the camera down a narrow city street. They are wearing a light-colored jacket and have a large, white, rectangular delivery bag on their back. The bag has a logo that looks like a stylized 'M' or a mountain shape. The street is lined with buildings on the left and parked cars on the right. Other people are visible in the distance. The entire image has a strong red color cast.
